

# Code.org

The 'maker movement' is more than robots or coding or building things. It is a mindset that encourages curiosity and exploration. Seen in roles from engineers to artists, they solve real-world design challenges by inventing and reinventing.

Coding takes many forms. At its very essence is problem solving, logic sequencing and communication. See if you can work through some of the activities in Code.org

## Start at the Basics:

Using Minecraft, Star Wars, Flappy Code, Frozen, or Classic Maze, see if you can figure out the logic and create instructions to further the goals.

**Think About:** What happens when you get to a section you have difficulty figuring out? What do you do? How do you get yourself to persevere? What strategies do you have to complete an activity?
