

Coding Apps (LightBot, CargoBot, Crossy Road, ScratchJr)

The 'maker movement' is more than robots or coding or building things. It is a mindset that encourages curiosity and exploration. Seen in roles from engineers to artists, they solve real-world design challenges by inventing and reinventing.

Every activity has a goal. These activities are all about logic. That's all coding is - developing a set of logical steps to do something that might be very cool.

Start with the Basics:

Launch the app that you wish and see how far you get. Remember it is all about creating logical steps to do something. Each puzzle increases the challenge.
